

WAREHOUSE MANAGEMENT SYSTEM

Optimise your supply chain

MECALUX

Software Solutions

Technological innovation for efficient warehouses

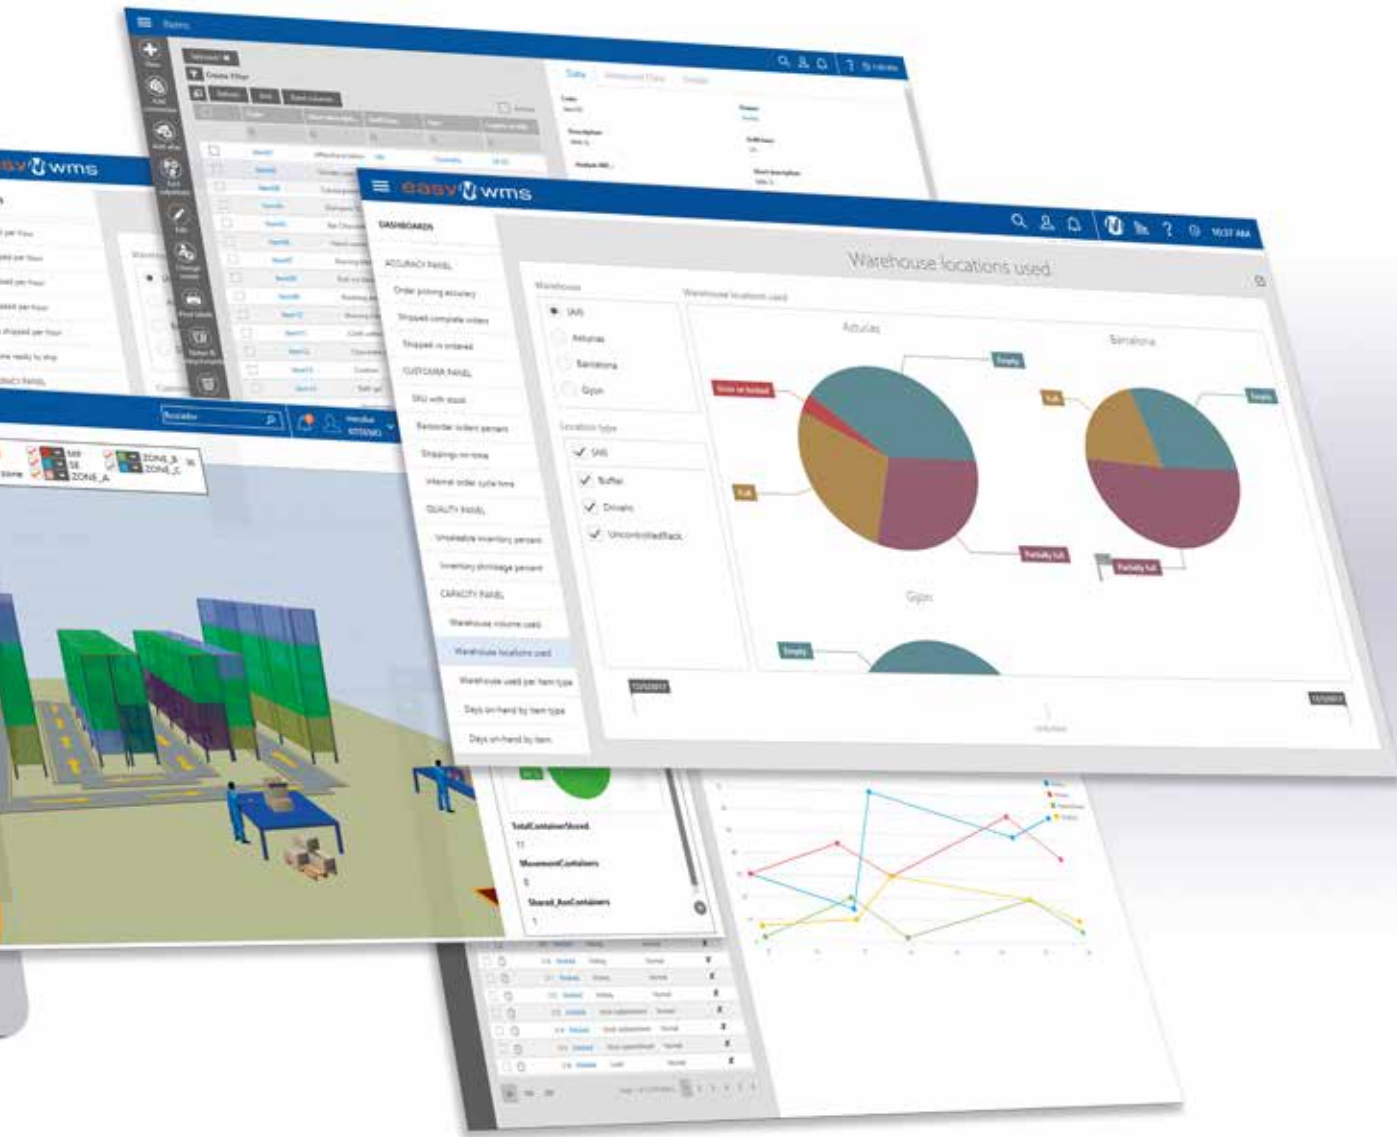

Capability is a competitive resource in this market, where companies must be ready and able to keep pace logistically with the daily demands of their customers.

Updated supply chain processes mean you can meet the growing demands of customers and consumers with faster delivery times, better products and customer care. The Internet of Things, artificial vision and other **cutting-edge technology** are game-changers for advancing companies.

Due to these changes, more and more companies must reorganise to deal with the unique challenges of doing business in different sectors. These days, every warehouse deals with Big Data, which involves analysing massive amounts of information. Thus, it is almost impossible to set up a distribution chain without a warehouse management software to improve overall operations.

Mecalux knows what you need and that is why we are offering new Easy WMS solutions to help grow your business. We can help increase productivity in your storage installation and manufacturing centres, and ensure top quality and tracking at each stage.

Easy WMS is a versatile system capable of **managing** operations in **manual warehouses** via handheld radiofrequency devices, **mixed warehouses** or large **automated installations**.

Easy software solutions

We know our way around your warehouse

Our new Easy WMS platform provides a variety of solutions for the entire logistics process. So, your company will be able to control and take action in all operations (manufacturing, storage of raw materials and finished products, picking or goods distribution). Plus, you can analyse your entire supply chain, providing global, open-ended visibility.

Its user-friendly interface is a highly intuitive platform, since it adapts to each feature and requirement to improve your company's productivity.

Interconnected solutions for your supply chain

Easy WMS warehouse management system

Easy WMS is a powerful, versatile, flexible software that can manage either a manually operated warehouse (paper or radiofrequency device run), a mixed installation or a large automated warehouse with the same efficiency.

Use it to streamline physical product flows and document management, from warehouse inputs to dispatches for guaranteed tracking.

Advantages

- > Receive real-time **stock** control
- > Lower logistics **costs**
- > Increase **storage** capacity
- > Reduce **handling tasks**
- > Eliminate **errors**
- > Get precise, high-speed **picking**
- > Adapt to new **e-commerce needs**
- > Manage **omnichannel operations**
- > Achieve a **fast ROI**

We collaborate with leading providers that endorse the quality, dependability and technical level of Easy WMS:

Easy Assistant

This solution gives you the autonomy to easily adapt your WMS to your business. Easy Assistant helps you change the design of your warehouses (racks, work area distribution, container types, etc.), configure new installations and adapt the user-interface.

Easy Builder

This developer tool lets you mould the WMS to your growing business. Easy Builder is a key instrument for partners or customers with their own IT development team who can customise and extend the Mecalux WMS, as needed.

Easy Monitor

A proactive maintenance system that helps identify and prevent technical problems that might affect the Mecalux Application Platform's apps and the supporting hardware infrastructure. The available mobile phone app means you can view alerts, consult open incidents and revise each warehouse's information.

Easy WMS modules

WMS for e-commerce

Our Easy WMS has a broader, improved capacity to manage different storage situations involved in picking orders for your online shop. These solutions will make your warehouse more competitive and ready to deal with the distribution of products sold online. The WMS for e-commerce is specifically designed for high-growth companies and those which need to keep pace with changing circumstances.

WMS for Manufacturing

Real-time stock efficiency and tracking add value to manufacturing processes. The WMS for Manufacturing effectively integrates supply processes in manufacturing lines with finished product stored away and later dispatched.

Supply Chain Analytics

It provides fast, simple viewing of the different supply chain indicators, giving you first-hand knowledge of the operations being carried out.

Multi Carrier Shipping

It adds advanced functionalities to the WMS to manage packaging and labelling operations, as well as automatic communication with the primary carrier agencies.

Labor Management System (LMS)

It records real-time task performances, bearing movements and the warehouse distribution in mind, and compares these to the estimated time standards afterwards. By doing so, it is easier to pinpoint and plan the tasks for each day, work shift, activity and zone, and know how many operators are needed according to peak workload periods.

WMS & Pallet Shuttle Integration

It comprises a single user-interface to run the WMS and the high-density Pallet Shuttle system, which means users can control the Pallet Shuttles easily. This operation is integrated with the other warehouse fulfilment operations.

Experts in managing your company's logistics

Businesses need solutions that improve their supply chain and fully adapt to the inner workings of their company.

Our technical team can analyse your business to provide a custom solution, one that keeps your corporate strategies and industry specificities in mind.

At Mecalux, we have a long history of collaborating with companies from all sectors. So, we have first-hand knowledge of their needs and the way these businesses work. We use our expertise to develop made-to-measure solutions for each sector, ready to step up productivity and efficiency in manufacturing centres.

Some of these industries include:
